

A

Relationship between FC reliability and BWAS attenuation

Imperfect reliability

→

Attenuated BWAS

$$E[\hat{\rho}] = \rho \sqrt{ICC(X) ICC(Y)} < \rho$$

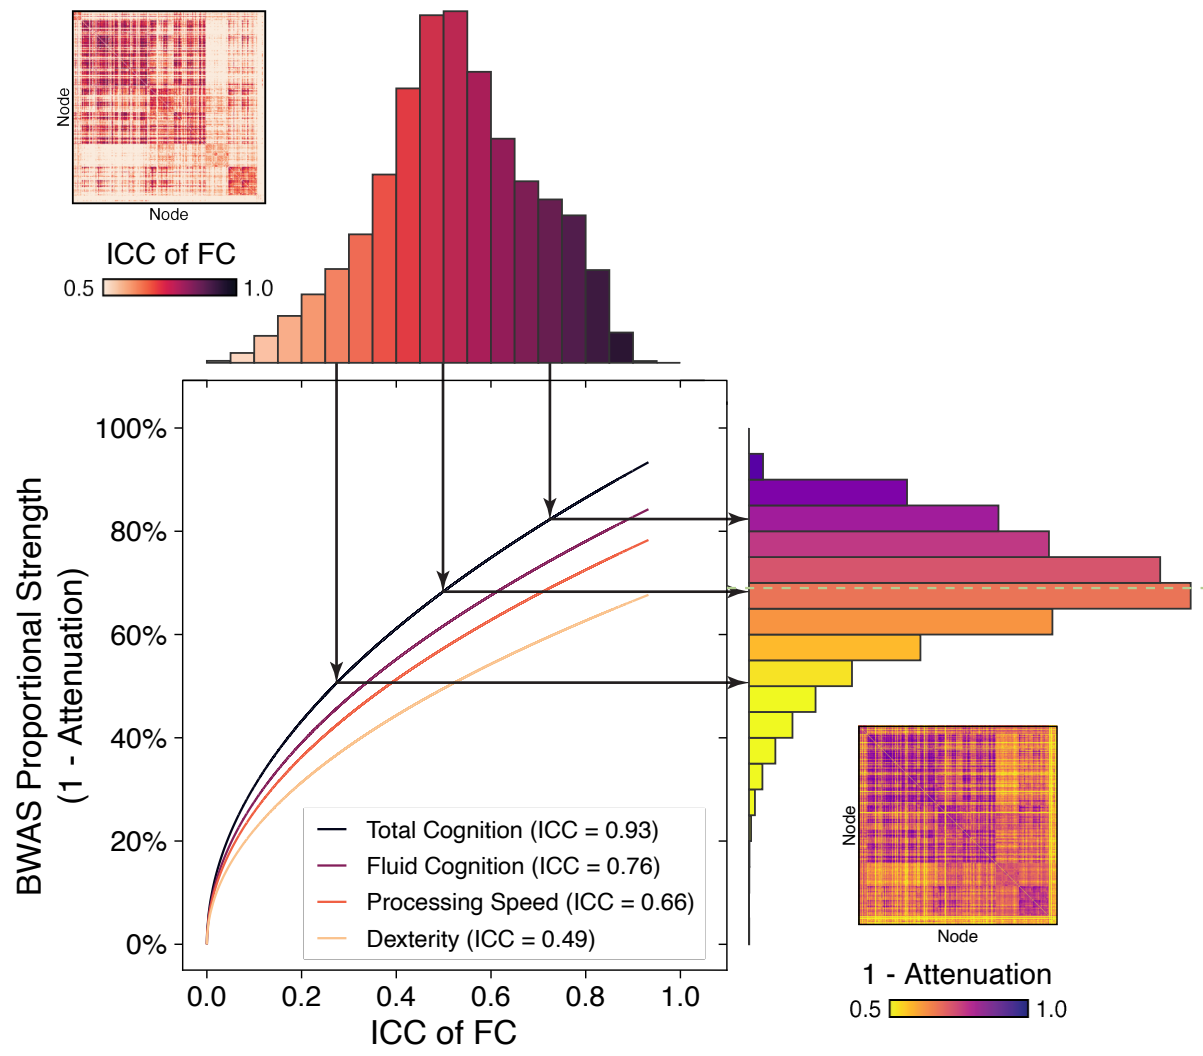

BWAS Proportional Strength (1 - Attenuation)

$$\frac{E[\hat{\rho}]}{\rho} = \sqrt{ICC(X) ICC(Y)} < 1$$

B

Expected BWAS attenuation

(T = 30 min, Stringent censoring, 36P)

C

Empirical BWAS attenuation

(Total Cognition)
